

許國麟 HUI KWOK LUN (YEAR 4
STUDENT; EXPECTED YEAR OF
GRADUATION: 2018)

The reason I chose biology programme of CUHK is the versatility compared to other life sciences programmes. The three study packages allow me to complete the undergraduate studies with combination of courses from BIOL, CMBI and BCHE programmes, and I can have a taste of different fields in life sciences before going deeper in my favorite topic. In addition to the Singapore field trip and the research project, my personal favorite is the intense biodiversity lab courses, and the conservation biology course, in which local frontier researchers in conservation gave us professional insights in current issues like the Chinese white dolphin. The learning environment of biology courses is comfortable as we can actually work on animals and native plants in lab, and the lecturers are willing to chat with us wherever we meet. In short, CUHK biology programme do require hard work to acquire knowledge in various disciplines, but the satisfaction and high degree of freedom are well worth the hardship.
